New polynucleotides encoding antigenic HIV Type C polypeptides, useful in applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy.

Claim 1; Fig 10; 233pp; English.

The present invention describes expression cassettes comprising a polymucleotide sequence encoding a polymetide comprising immunogenic HIV type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gay, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (I). (I) have immunostimulant activity and can be used in gene therapy.

The HIV type C polynucleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV Type C proteins. The polynucleotides are particularly useful in gene therapy and DNA immunisation applications. ABL39942 to ABL40054 and ABB06204 to ABB06215 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                   ACCTGAACTTCCCCATCAGCCCCATCGAGACCGTGCCCGTGAAGCTGAAGCCCGCATG

also relates to a recombinant expression system for use in a host cell comprising an expression cassette, where the polymucleoride sequence further comprises control elements capable of driving expression in the selected host cell, a cell comprising an expression cassette where the polymucleotide sequence further comprises control elements compatible with the expression in the cell and a composition for generating an immunological response, comprising an expression cassette. The expression cassette and the methods of the invention are useful in eliciting an immune response, in DNA immunisation, in generation of packaging cell lines and in producing HIV Type C proteins. This sequence represents an HIV-1 polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
generating humoral or cellular immune responses against HIV in a subject, especially humans.
                                                                                       Example 1; Fig 34; 262pp; English.

encoding

```
The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polypeptide including an HIV Gag. Int, Nef, plSmaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramucosally, intranasally, intradermally, transdermally, intravaginally, intravectully, orally or intravenously. The expression cassette is useful polymentation, generating packaging cell lines and producing HIV polymelecide sequence represents the DNA of an HIV Type C related sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                   AACTTCAAGGGCCCCAAGGGCATCATCAAGTGCTTCAACTGCGGGAAGGGGGCCACATC 126

ø encoding Pol, Tat, wew expression cassette comprising a polynucleotide sequence encopolypeptide including an HIV Gag, Env. Int. Nef. p15RnaseH, Pol. Prot. or Rev polypeptide, useful for immunization, or generating packaging cell lines.

Disclosure; Fig 6; 301pp; English

The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Ent, Nef, pismaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramucosally, intransally, intransally, intransally, intraversion cassette is useful intrarectally, orally or intravenously. The expression cassette is useful polympoptides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention. useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                            polymucleotide sequence encoding a polymetria comprising a polymucleotide sequence encoding a polymetria comprising a type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (I). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polymucleotides are useful in applications including DNA immunisation of packaging cell lines, and production of HIV Type C proteins. The polymucleotides are particularly useful in gene therapy and DNA immunisation applications. ABL39942 to ABL40054 and ABB06205 represent sequences used in the exemplification of
                                                                                                                                                                                                                                 Type C polypeptides, useful : generation of packaging cell

```
The invention relates to an expression cassette comprising a polymucleotide sequence encoding an HIV Pol polypeptide. The invention also relates to a recombinant expression system for use in a host cell comprising an expression cassette, where the polymucleotide sequence further comprises control elements capable of driving expression in the selected host cell, a cell comprising an expression cassette where the polymucleotide sequence further comprises control elements compatible with the expression in the cell and a composition for generating an immunological response, comprising an expression cassette. The expression cassette and the methods of the invention are useful in eliciting an immune response, in DNA immunisation, in generation of packaging cell lines and in producing HIV Type C proteins. This sequence represents an HIV-1 polymucleotide of the invention.
                                                                                                                                                                                                                                                                         New expression cassette comprising a polynucleotide sequence encoding an HIV Pol polypeptide, useful in eliciting an immune response, in DNA immunization, generating of packaging cell lines or in producing HIV Type

```
The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Env, Int, Nef, piSrasseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramucosally, intranasally, subcutaneously, intraveginally, intravectally, orally or intravenously. The expression cassette is useful for immunisation, generating packaging cell lines and producing HIV polypeptides. This polymolectide sequence represents the DNA of an HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   374 TCCCCCAGATCACCCTGTGGCAGCGCCCCTGGTGAGCATCAAGGTGGGCGGCCAGATCA 433

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Int. Nef. pISRnasse, Pol. Tat. Prot. or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramucosally, intransally, 
                                                                                                                                                                                                                                                                                                                                                                                                         Rensburg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New expression cassette comprising a polynucleotide sequence enco polypeptide including an HIV Gag, Env, Int, Nef, pi5RnaseH, Pol, Prot, or Rev polypeptide, useful for immunization, or generating packaging cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB 10; Length 3930;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           193
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AGGACTGCACCGAGCGCCAGGCCAACTTCTTCCGCGAGGACCTGGCCTTCCCCCAGGGCA 253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New synthetic polynucleotides encoding antigenic HIV type B and/or type C polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, especially humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immunosenses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
                                                                                                                      Immunogenic HIV polypeptide; human immunodeficiency virus; HIV; vaccine; gene therapy; packaging cell line; humoral immune response; cellular immune response; gene delivery vector; DNA immunisation; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           73
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2801 AGGGCCCCAAGGGCATCATCAAGTGCTTCAACTGCGGCAAGGAGGGCCACATCGCCCGCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Enr, Nef, pisRnaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to trach HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscosally, intranasally, intranscouly, intranscouly, intravenously, intravenously, intravenously, intravenously, per intravenously, reassion cassette is useful for immunisation, generating packaging cell lines and producing HIV polypeptides. This polymocleotide sequence represents the DNA of an HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   74 AGGGCCCCAAGCGCATCATCAAGTGCTTCAACTGCGGCAAGGGGCCACATCGCCCGCA 133
